

Allowing this merger would essentially create the only GSM carrier in America, this is a Monopoly. This merger would only hurt the consumer as there will be MUCH less innovation and ATT will eventually raise prices to pay for a \$39 Billion dollar sale. Both networks have different 3g/4g frequencies which makes phones useless to Tmo customers. ATT has had horrible customer service for years now and never cared for the consumer. They do everything possible to strip every single customers with fees such as tethering and limiting internet usage at 2GB. If ATT has \$39 Billion to buy out the only GSM competition they should spend that money improving their network and raising new towers. They have had a strained network ever since the iPhone, and where has all of that money went? That's right their pockets.

The common man doesn't have much of a voice so I urge you, the FFC, to not pass this sale and read everyone's comments. Don't let ATT become a monopoly like they were in the old days.
